Advisory Action

Application No.	Applicant(s)	
09/778,672	CHING-HSAING ET AL.	
Examiner	Art Unit	
Q. Janice Li	1632	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

THE REPLY FILED 11 July 2003 FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE. Therefore, further action by the applicant is required to avoid abandonment of this application. A proper reply to a final rejection under 37 CFR 1.113 may only be either: (1) a timely filed amendment which places the application in condition for allowance; (2) a timely filed Notice of Appeal (with appeal fee); or (3) a timely filed Request for Continued Examination (RCE) in compliance with 37 CFR 1.114.

Examination (RCE) in compliance with 37 CFR 1.114.) a timely filed Request for Continued
PERIOD FOR REPLY [check either a) or	b)]
a) The period for reply expiresmonths from the mailing date of the final rejection.	
b) The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date no event, however, will the statutory period for reply expire later than SIX MONTHS from ONLY CHECK THIS BOX WHEN THE FIRST REPLY WAS FILED WITHIN TWO MONT 706.07(f).	the mailing date of the final rejection. HS OF THE FINAL REJECTION. See MPEP
Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under the have been filed is the date for purposes of determining the period of extension and the corresponder under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).	nding amount of the fee. The appropriate extension of for reply originally set in the final Office action; or
1. A Notice of Appeal was filed on Appellant's Brief must be filed within 37 CFR 1.192(a), or any extension thereof (37 CFR 1.191(d)), to avoid disr	in the period set forth in missal of the appeal.
2. The proposed amendment(s) will not be entered because:	
(a) \square they raise new issues that would require further consideration and/or s	search (see NOTE below);
(b) ☐ they raise the issue of new matter (see Note below);	
(c) ☐ they are not deemed to place the application in better form for appeal issues for appeal; and/or	by materially reducing or simplifying the
(d) they present additional claims without canceling a corresponding num	nber of finally rejected claims.
NOTE:	
3. Applicant's reply has overcome the following rejection(s):	
4. Newly proposed or amended claim(s) would be allowable if submitted canceling the non-allowable claim(s).	d in a separate, timely filed amendment
5. ☐ The a) ☐ affidavit, b) ☐ exhibit, or c) ☐ request for reconsideration has bee application in condition for allowance because: See attachment.	en considered but does NOT place the
6. The affidavit or exhibit will NOT be considered because it is not directed SC raised by the Examiner in the final rejection.	DLELY to issues which were newly
7.⊠ For purposes of Appeal, the proposed amendment(s) a) will not be enter explanation of how the new or amended claims would be rejected is provided in the context of th	red or b)⊠ will be entered and an ded below or appended.
The status of the claim(s) is (or will be) as follows:	
Claim(s) allowed:	
Claim(s) objected to:	
Claim(s) rejected: <u>24-33,35-39 and 41-49</u> .	
Claim(s) withdrawn from consideration:	
8. The proposed drawing correction filed on is a) approved or b)	disapproved by the Examiner.

Advisory Action

Part of Paper No. 21

Application/Control Number: 09/778,672

Art Unit: 1632

Attachment to Box 5.

The amended claims 24 and 43 added the limitation, "wherein the promoter is functional in the non-pathogenic, Gram-positive bacterium", and "expressing the allergen in the non-pathogenic, Gram-positive bacterium". These limitations could be found in the teaching of Medaglini et al, who teach a system allowing the stable expression of a wide range of protein antigens on the surface of non-pathogenic, Gram-positive commensal bacterium (abstract), the promoter in the pSMB-7 is apparently functional in the non-pathogenic, Gram-positive bacterium. The amended claims 36 and 44 added the limitation, "expressing the allergen in the lactic acid bacterium while the lactic acid bacterium is in the subject". Casas et al and Kailasapathy et al teach expressing heterologous protein in the lactic acid bacterium after they are administered to a subject (vaccine delivery vehicle).

In paper #20, applicants only presented arguments to US patent 5,958,891 and Medaglini reference, which in addition to reiterating the previous arguments, relied mostly on the newly submitted Declaration of Dr. Hsu.

In response, first, applicants are reminded that the Declaration has not been considered because this rejection has been on record since the first action on merit (Paper #13). Second, regarding Medalini's system, as indicated in Paper# 18, it is a general system for delivering broad range of proteins in an individual and inducing immune response of the host to the expressed protein. The working example is expressing and inducing immune response to an allergen. The system is an alternative

Art Unit: 1632

for direct nucleic acid delivery. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See In re Fine, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Hsu et al teach a method for treatment of allergy by delivering an allergen to a host via direct injection of a nucleic acid expressing the allergen, and Medaglini et al teach another means of delivering an allergen to a host by using a non-pathogneic Grampositive commensal bacteria expressing an allergen. Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the method taught by Hsu et al, by simply substituting the nucleic acid construct with the bacteria expression system with a reasonable expectation of success. The ordinary skilled artisan would have been motivated to modify the claimed invention because oral dosing is more practical in clinical vaccination. Thus, the claimed invention as a whole was prima facie obvious in the absence of evidence to the contrary.

Therefore, the rejections stand.
